

Package ‘PacketLLM’

August 23, 2025

Title Interactive 'OpenAI' Model Integration in 'RStudio'

Version 0.1.1

Description Offers an interactive 'RStudio' gadget interface for communicating with 'OpenAI' large language models (e.g., 'gpt-5', 'gpt-5-mini', 'gpt-5-nano') ([<https://platform.openai.com/docs/api-reference>](https://platform.openai.com/docs/api-reference)). Enables users to conduct multiple chat conversations simultaneously in separate tabs. Supports uploading local files (R, PDF, DOCX) to provide context for the models. Allows per-conversation configuration of system messages (where supported by the model). API interactions via the 'httr' package are performed asynchronously using 'promises' and 'future' to avoid blocking the R console. Useful for tasks like code generation, text summarization, and document analysis directly within the 'RStudio' environment. Requires an 'OpenAI' API key set as an environment variable.

add_attachment_to_active_conversation
<i>Add attachment to active conversation</i>

Description

Add attachment to active conversation

Usage

add_attachment_to_active_conversation(name, content)

Arguments

name	File name.
content	File content as string.

Value

Logical.

add_message_to_active_history	<i>Add a message to the active conversation</i>
-------------------------------	---

Description

Locks the model on the first assistant message. Sets title on the first user message.

Usage

add_message_to_active_history(role, content)

Arguments

role	'user' 'assistant' 'system'
content	Message content

Value

Result list (type + extra fields) or error list.

add_user_message	<i>Add user message to the active conversation</i>
------------------	--

Description

Add user message to the active conversation

Usage

add_user_message(text)

Arguments

text	Single character string.
------	--------------------------

Value

Invisible NULL.

available_openai_models

List of available OpenAI models for selection in the UI

Description

List of available OpenAI models for selection in the UI

Usage

available_openai_models

Format

An object of class character of length 3.

call_openai_chat

Call OpenAI API

Description

Sends messages to the OpenAI Chat Completions API and returns the assistant content. Temperature is not sent; models run with API defaults.

Usage

call_openai_chat(messages, model)

Arguments

messages List of messages (each a list with 'role' and 'content').
 model OpenAI model to use.

Value

Character string with assistant reply, or NULL on unexpected response.

Examples

```
## Not run:
  msgs <- list(
    list(role = "system", content = "You are concise."),
    list(role = "user", content = "What does httr do?")
  )
  call_openai_chat(messages = msgs, model = "gpt-5-mini")

## End(Not run)
```

check_api_key	<i>Check API Key</i>
---------------	----------------------

Description

Verifies that OPENAI_API_KEY is set. Stops if missing.

Usage

check_api_key()

Value

Invisible TRUE if set.

Examples

```
## Not run:
  check_api_key()

## End(Not run)
```

create_new_conversation	<i>Create a new conversation</i>
-------------------------	----------------------------------

Description

Create a new conversation

Usage

```
create_new_conversation(
  activate = FALSE,
  add_initial_settings = TRUE,
  title = NULL
)
```

Arguments

activate	Logical. Activate immediately?
add_initial_settings	Logical. Add default model and system message?
title	Optional title; if NULL, a time-based title is used.

Value

Character: conversation ID.

delete_conversation	<i>Delete a conversation</i>
---------------------	------------------------------

Description

Delete a conversation

Usage

```
delete_conversation(id)
```

Arguments

id	Conversation ID.
----	------------------

Value

TRUE if deleted, FALSE otherwise.

get_active_chat_history	<i>Get active chat history</i>
-------------------------	--------------------------------

Description

Get active chat history

Usage

```
get_active_chat_history()
```

Value

List of messages (possibly empty).

get_active_conversation
<i>Get active conversation object</i>

Description

Get active conversation object

Usage

get_active_conversation()

Value

List or NULL.

get_active_conversation_attachments
<i>Get attachments for active conversation</i>

Description

Get attachments for active conversation

Usage

get_active_conversation_attachments()

Value

List (possibly empty).

get_active_conversation_id
<i>Get active conversation ID</i>

Description

Get active conversation ID

Usage

get_active_conversation_id()

Value

Character or NULL.

`get_all_conversation_ids`*Get all conversation IDs*

Description

Get all conversation IDs

Usage

```
get_all_conversation_ids()
```

Value

Character vector.

`get_assistant_response`*Get assistant response for the active conversation*

Description

Prepares messages and calls the API. Adds the reply to history.

Usage

```
get_assistant_response()
```

Value

Character with assistant reply or error message.

get_conversation_attachments
<i>Get attachments by ID</i>

Description

Get attachments by ID

Usage

get_conversation_attachments(id)

Arguments

id Conversation ID.

Value

List or NULL.

get_conversation_data	<i>Get conversation data by ID</i>
-----------------------	------------------------------------

Description

Get conversation data by ID

Usage

get_conversation_data(id)

Arguments

id Conversation ID.

Value

List or NULL.

<code>get_conversation_history</code>
<i>Get conversation history by ID</i>

Description

Get conversation history by ID

Usage

`get_conversation_history(id)`

Arguments

`id` Conversation ID.

Value

List or NULL.

<code>get_conversation_model</code>
<i>Get model for conversation</i>

Description

Get model for conversation

Usage

`get_conversation_model(id)`

Arguments

`id` Conversation ID.

Value

Character or NULL.

`get_conversation_title`

Get conversation title by ID

Description

Get conversation title by ID

Usage

`get_conversation_title(id)`

Arguments

`id` Conversation ID.

Value

Character or NULL.

`initialize_history_manager`

Initialize the history manager

Description

Clears state and creates a single new conversation, then activates it.

Usage

`initialize_history_manager()`

Value

Character: ID of the created conversation.

is_conversation_started	<i>Has the conversation started (model locked)?</i>
-------------------------	---

Description

Has the conversation started (model locked)?

Usage

is_conversation_started(id)

Arguments

id Conversation ID.

Value

Logical.

parse_pages	<i>Parse page range</i>
-------------	-------------------------

Description

This function processes a character string specifying a page range (e.g., "1-3,5") and returns a numeric vector containing the individual page numbers, sorted and unique.

Usage

parse_pages(pages_str)

Arguments

pages_str Character string specifying pages, e.g., "1-3,5".

Value

A numeric vector containing the unique page numbers specified in the input string, sorted in ascending order. Returns an empty integer vector if the input string is empty or contains only whitespace. Stops with an error if the input pages_str is not a single character string or if the format within the string is invalid (e.g., non-numeric parts, invalid ranges).

Examples

```
# Example 1: Simple range and single page
page_string1 <- "1-3, 5"
parsed_pages1 <- parse_pages(page_string1)
print(parsed_pages1) # Output: [1] 1 2 3 5

# Example 2: Multiple ranges and single pages, with spaces and duplicates
page_string2 <- " 2, 4-6, 9 , 11-12, 5 "
parsed_pages2 <- parse_pages(page_string2)
print(parsed_pages2) # Output: [1] 2 4 5 6 9 11 12 (sorted, unique)

# Example 3: Single number
page_string3 <- "10"
parsed_pages3 <- parse_pages(page_string3)
print(parsed_pages3) # Output: [1] 10

# Example 4: Empty string input
page_string_empty <- ""
parsed_pages_empty <- parse_pages(page_string_empty)
print(parsed_pages_empty) # Output: integer(0)

# Example 5: Invalid input (non-numeric) - demonstrates error handling
page_string_invalid <- "1-3, five"
## Not run:
# This will stop with an error message about "five"
tryCatch(parse_pages(page_string_invalid), error = function(e) print(e$message))

## End(Not run)

# Example 6: Invalid range format (missing end) - demonstrates error handling
page_string_invalid_range <- "1-"
## Not run:
# This will stop with an error message about invalid range format
tryCatch(parse_pages(page_string_invalid_range), error = function(e) print(e$message))

## End(Not run)

# Example 7: Invalid range format (start > end) - demonstrates error handling
page_string_invalid_order <- "5-3"
## Not run:
# This will stop with an error message about invalid range values
tryCatch(parse_pages(page_string_invalid_order), error = function(e) print(e$message))

## End(Not run)
```

Description

This function reads the content of a file with the extension .R, .pdf, or .docx and returns it as a single character string. TXT files are also supported. For PDF files, if the pages parameter is provided, only the selected pages will be read.

Usage

```
read_file_content(file_path, pages = NULL)
```

Arguments

file_path	Character string. Path to the file.
pages	Optional. A numeric vector specifying which pages (for PDF) should be read.

Value

A character string containing the file content, with pages separated by double newlines for PDF files. Stops with an error if the file does not exist, the format is unsupported, or required packages (pdftools for PDF, readtext for DOCX) are not installed or if pages is not numeric when provided.

Examples

```
# --- Example for reading an R file ---
# Create a temporary R file
temp_r_file <- tempfile(fileext = ".R")
writeLines(c("x <- 1", "print(x + 1)"), temp_r_file)

# Read the content
r_content <- tryCatch(read_file_content(temp_r_file), error = function(e) e$message)
print(r_content)

# Clean up the temporary file
unlink(temp_r_file)

# --- Example for reading a TXT file ---
temp_txt_file <- tempfile(fileext = ".txt")
writeLines(c("Line one.", "Second line."), temp_txt_file)
txt_content <- tryCatch(read_file_content(temp_txt_file), error = function(e) e$message)
print(txt_content)
unlink(temp_txt_file)

# --- Example for PDF (requires pdftools, only run if installed) ---
## Not run:
# This part requires the 'pdftools' package and a valid PDF file.
# Provide a path to an actual PDF file to test this functionality.
# Replace "path/to/your/sample.pdf" with a real path.

pdf_file_path <- "path/to/your/sample.pdf"

# Check if pdftools is installed and the file exists
```

```

if (requireNamespace("pdftools", quietly = TRUE) && file.exists(pdf_file_path)) {

  # Example: Read all pages
  pdf_content_all <- tryCatch(
    read_file_content(pdf_file_path),
    error = function(e) paste("Error reading all pages:", e$message)
  )
  # print(substr(pdf_content_all, 1, 100)) # Print first 100 chars

  # Example: Read only page 1
  pdf_content_page1 <- tryCatch(
    read_file_content(pdf_file_path, pages = 1),
    error = function(e) paste("Error reading page 1:", e$message)
  )
  # print(pdf_content_page1)

} else if (!requireNamespace("pdftools", quietly = TRUE)) {
  message("Skipping PDF example: 'pdftools' package not installed.")
} else {
  message("Skipping PDF example: File not found at '", pdf_file_path, "'")
}

## End(Not run)
# Note: Reading DOCX files is also supported if the 'readtext' package
# is installed, but a simple runnable example is difficult to create
# without including a sample file or complex setup.

```

reset_history_manager *Reset the history manager*

Description

Reset the history manager

Usage

```
reset_history_manager()
```

Value

Invisible NULL.

`run_llm_chat_app`*Run the LLM Chat Application in RStudio Window*

Description

Launches the Shiny application as a Gadget in the RStudio Viewer pane (or a separate window). Interacts with LLM models, managing conversations, attachments, and settings, without blocking the R console when opened in a new window.

Usage

```
run_llm_chat_app()
```

Value

Value passed to shiny::stopApp() (typically NULL).

Examples

```
## Not run:  
run_llm_chat_app()  
  
## End(Not run)
```

`set_active_conversation`*Set the active conversation*

Description

Set the active conversation

Usage

```
set_active_conversation(id)
```

Arguments

`id` Conversation ID or NULL.

Value

Invisible NULL.

`set_conversation_model`*Set model for conversation (if not started)*

Description

Set model for conversation (if not started)

Usage

```
set_conversation_model(id, model_name)
```

Arguments

<code>id</code>	Conversation ID.
<code>model_name</code>	Model name (must be in <code>available_openai_models</code>).

Value

Logical.

`set_conversation_system_message`*Set system message for conversation*

Description

Set system message for conversation

Usage

```
set_conversation_system_message(id, message)
```

Arguments

<code>id</code>	Conversation ID.
<code>message</code>	Single string system message.

Value

Logical.
