

Chrome Enterprise Recommended Solution Overview with Signagelive

An enterprise grade digital signage content management system.

Digital signage has been tried, tested and proven to boost business results, improving sales by nearly 30%, according to some of the latest research.

Signagelive on ChromeOS maximises the impact of digital signage, enabling businesses to develop and scale out engaging content strategies that work for them.

With Signagelive on ChromeOS, you can create, publish, manage and monitor any kind of content for your screens, from advertising campaigns and corporate branding to company-wide employee messaging and data analytics.

Securely publish content – even sensitive data – to your digital signage screens from anywhere and at any time.

Discover the benefits

Broadcast content to one, or hundreds of screens in minutes.

With Signagelive on ChromeOS, you can deliver a step up, cost-efficient digital signage solution, that will help to reduce your IT overhead, the time to deploy and maintenance costs.

Easily create dynamic content with any of the 500+ free-to-use content applications on the Signagelive Marketplace.

With Signagelive Secure Dashboards, securely share company data on your workplace digital signage, without exposing your login credentials or publicly revealing any data through a URL.

Streamline and automate your content management and distribution with a number of Signagelive features.
