About the Tutorial

Chemistry is one of the disciplines of science under which, we study about the various aspects of the matters i.e. composition, properties, their reactions, and the use of such reactions to form new substances. In its given premises, Chemistry includes a wide range of topics such as organic chemistry, inorganic chemistry, physical chemistry, analytical chemistry, biochemistry, etc.

Because of having wide range of topics, this tutorial is divided into two parts namely Chemistry Part 1 and Chemistry Part 2. Further, these two parts are divided into different chapters for an easy understanding.

Audience

This tutorial is designed exclusively for the students preparing for the different competitive exams including **civil services, banking, railway, eligibility test**, and all other competitive exams of such kind.

Prerequisites

This tutorial is partly based on **NCERT Chemistry** (class 8th to 10th) i.e. Part I and Part 2 is prepared from the different reliable sources and represents largely the significant facts and figures vital for the competitive exams.

This tutorial starts with the basic concepts of Chemistry; however, prior experience of reading the NCERT science (Chemistry) books is recommended for the easy understanding.

Table of Content

	About the Tutorial.....	1
	Audience	1
	Prerequisites	1
	Disclaimer & Copyright	1
	Table of Content	2
1.	CHEMISTRY – INTRODUCTION.....	9
	Introduction	9
2.	BRANCHES OF CHEMISTRY	12
3.	RADIOACTIVITY	15
	Introduction	15
	Radioactive Rays	15
	Alpha (α) Particles.....	16
	Beta (β) Particles	17
	Gamma (γ) Particles	17
	Uses of Radioactive Elements	17
4.	NUCLEAR ENERGY	18
	Introduction	18
	Nuclear Fission	18
	Types of Nuclear Fission.....	19
	Chain Reaction	19
	Fission Reactions.....	20
	Basic components of Nuclear Reactor	20
	Nuclear Fusion	20

5.	METALS.....	22
	Introduction	22
	Features of Metals	22
	Alloys	23
	Metal Terminologies	23
	Application of Metals.....	24
6.	METALLURGY	25
7.	SODIUM.....	28
	Introduction	28
	Salient Features of Sodium.....	29
	Sodium Compounds	29
	Occurrence of Sodium	30
	Uses of Sodium	30
8.	CALCIUM.....	32
	Introduction	32
	Salient Features of Calcium	33
	Occurrence.....	34
	Compounds of Calcium	34
	Uses of Calcium	34
9.	ALUMINUM.....	36
	Introduction	36
	Salient Features of Aluminum	36
	Occurrence of Aluminum	37
	Compounds of Aluminum	37

	Usage of Aluminum.....	37
10.	MAGNESIUM.....	39
	Introduction	39
	Salient Features of Magnesium	39
	Occurrence of Magnesium	40
	Compounds of Magnesium	41
	Usages of Magnesium	41
11.	MANGANESE.....	43
	Introduction	43
	Features of Manganese.....	44
	Occurrence of Manganese.....	44
	Compounds of Manganese.....	44
	Uses of Manganese	45
12.	IRON	46
	Introduction	46
	Salient Features of Iron	46
	Occurrence of Iron	47
	Types of Iron	47
	Compounds of Iron	47
	Uses of Iron.....	48
13.	COPPER.....	49
	Introduction	49
	Salient Features of Copper	49
	Occurrence of Copper	50

	Alloys of Copper	50
	Compounds of Copper	51
	Uses of Copper	51
14.	SILVER	53
	Introduction	53
	Salient Features of Silver	53
	Occurrence of Silver	54
	Alloys of Silver	54
	Compounds of Silver	54
	Uses of Silver	55
15.	GOLD	56
	Introduction	56
	Salient Features of Gold	56
	Occurrence of Gold	57
	Alloys of Gold	57
	Compounds of Gold	57
	Uses of Gold	58
16.	PLATINUM	59
	Introduction	59
	Salient Features of Platinum	59
	Occurrence of Platinum	60
	Alloys of Platinum	61
	Compounds of Platinum	61
	Uses of Platinum	61

17.	ZINC	63
	Introduction	63
	Salient Features of Zinc	63
	Occurrence of Zinc	64
	Alloys of Zinc	64
	Compounds of Zinc.....	64
	Uses of Zinc	65
18.	MERCURY.....	67
	Introduction	67
	Salient Features of Mercury	67
	Occurrence of Mercury	68
	Alloys of Mercury	68
	Compounds of Mercury.....	68
	Uses of Mercury	69
19.	PLUTONIUM.....	70
	Introduction	70
	Salient Features of Plutonium	70
	Occurrence of Plutonium	71
	Alloys of Plutonium.....	71
	Compounds of Plutonium	72
	Uses of Plutonium	72
20.	URANIUM	73
	Introduction	73
	Salient Features of Uranium.....	73
	Occurrence of Uranium	74

	Alloys of Uranium	74
	Compounds of Uranium	74
	Uses of Uranium	75
21.	LEAD	76
	Introduction	76
	Salient Features of Lead	76
	Occurrence of Lead	77
	Alloys of Lead	77
	Compounds of Lead	77
	Uses of Lead	78
	Pre-caution:	78
22.	THORIUM	79
	Introduction	79
	Salient Features of Thorium	79
	Occurrence of Thorium	80
	Alloys of Thorium	80
	Compounds of Thorium	80
	Uses of Thorium	81
23.	HYDROGEN	82
	Introduction	82
	Salient Features of Hydrogen	82
	Occurrence of Hydrogen	83
	Compounds of Hydrogen	83
	Uses of Hydrogen	84

24.	HELIUM.....	86
	Introduction	86
	Salient Features of Helium	86
	Occurrence of Helium.....	87
	Compounds of Helium.....	87
	Isotopes of Helium	87
	Uses of Helium	87
25.	OXYGEN	89
	Introduction	89
	Salient Features of Oxygen.....	89
	Occurrence of Oxygen	90
	Compounds of Oxygen	90
	Uses of Oxygen	91
26.	CARBON	93
	Introduction	93
	Salient Features of Carbon	93
	Occurrence of Carbon	94
	Compounds of Carbon.....	94
	Uses of Carbon	95
27.	NITROGEN.....	96
	Introduction	96
	Salient Features of Nitrogen.....	97
	Occurrence of Nitrogen	97
	Compounds of Nitrogen	97
	Uses of Nitrogen	98

28.	CHEMICAL LAWS.....	99
29.	DISCOVERY OF ELEMENTS.....	102
	Introduction	102
30.	ELEMENTS WITH THEIR VALENCE	106
31.	ELEMENTS WITH THEIR ATOMIC NUMBER.....	111
32.	NOBEL PRIZE IN CHEMISTRY.....	117

1. CHEMISTRY – INTRODUCTION

Introduction

- Chemistry is a branch of Natural Science that studies about the structure, composition, and changing properties of matters.
- Chemistry studies the smallest part of a matter i.e. atom (along with its all properties) to the large materials (e.g. gold, silver, iron, etc.) and their properties.
- Chemistry also studies the intermolecular forces (that provide matter the general properties) and the interactions between substances through the chemical reactions.

- In 1998, Professor Raymond Chang defined Chemistry as –
"Chemistry" to mean the study of matter and the changes it undergoes.
- It is believed that the study of chemistry started with the theory of four elements propounded by Aristotle.
- The four theory of elements states that *"fire, air, earth, and water were the fundamental elements from which everything is formed as combination."*

- Because of his classical work namely "***The Sceptical Chymist***," Robert Boyle, is known as the founding father of chemistry.
- Boyle formulated a law, became popular as 'Boyle's Law.'
- Boyle's law is an experimental gas law that analyzes the relationship between the pressure of a gas and volume of the respective container.
- By advocating his law, Boyle rejected the classical 'four elements' theory.
- The American scientists Linus Pauling and Gilbert N. Lewis collectively propounded the electronic theory of chemical bonds and molecular orbitals.
- The United Nations declared 2011 as the 'International Year of Chemistry.'
- The matter is defined in chemistry as anything that has rest mass and volume and also takes space.
- The **matter** is made up of particles.
- The **atom** is the fundamental unit of chemistry.
- The atom consists of a dense core known as the **atomic nucleus** and it is surrounded by a space known as the **electron cloud**.
- The nucleus (of an atom) is composed of **protons (+ve charged particles)** and **neutrons (neutral or uncharged particles)**; collectively, these two are known as **nucleons** (as shown in the image given below).
- A chemical element is a pure form of a substance; it consists of single type of atom.
- The periodic table is the standardized representation of all the available chemical elements.
- A compound is a pure form of a substance; it composed of more than one elements.

A molecule is the smallest indivisible part of a pure chemical substance; molecule has distinctive set of chemical properties (see the image given below).

2. BRANCHES OF CHEMISTRY

- The following table illustrates the branches of chemistry:

Branch	Sub-branch	Definition
Physical Chemistry	Physical Chemistry	Study of the physical properties of molecules
	Chemical Kinetics	Study of the rates of chemical reactions
	Electrochemistry	Study of the interaction of atoms, molecules, ions, and electric current (i.e. electron transfer between the electrode and the electrolyte or species)
	Surface chemistry	study of chemical reactions at surfaces (of substances)
	Thermochemistry	Study the relation between the chemical action and the amount of heat absorbed
	Quantum Chemistry	Study of application of quantum mechanics in physical models
	Spectroscopy	Study of spectra of light or radiation
	Photochemistry	study of the chemical effects caused by light
Organic Chemistry	Organic Chemistry	Study of structure, properties, and preparation of the chemical (carbon) compounds (e.g. fuels, plastics, food additives, and drugs)
	Stereochemistry	Study of the relative spatial arrangement of atoms (in molecules)
	Physical organic chemistry	study of structure and reactivity (interrelationship) in organic molecules

	Polymer Chemistry	Study of polymer molecules (composition and creation)
	Organometallic Chemistry	Study of chemicals that contain bonds (especially between a carbon and a metal)
	Medicinal chemistry	Study of designing, developing, and synthesizing the drugs & medicines
Inorganic chemistry	Inorganic chemistry	Study of all materials that are not organic (such as minerals, metals, catalysts, crystal structures, etc.)
	Organometallic Chemistry	Study of chemical compounds containing bonds (especially between carbon and metal)
	Solid-state Chemistry	Study of chemical compounds that contains bonds between carbon and metal
	Nuclear Chemistry	Study of radioactive substances
	Geochemistry	Study of chemical composition the earth (e.g. rocks, minerals & atmosphere)
	Bioinorganic Chemistry	Study of interactions between metal ions and living tissue
	Coordination Chemistry	
Biochemistry	Biochemistry	Study of chemical reaction (and changes) in living beings
	Molecular Biochemistry	Study of Biomolecules along with their functions
	Clinical Biochemistry	Study of chemical changes in living beings, caused by caused by different diseases
	Molecular Biology	Study of the different types of DNA, RNA, and protein biosynthesis (and their relationships)

	Agricultural biochemistry	Study of chemistry of fauna (i.e. plants)
Analytical Chemistry		Study of standardized experimental methods in chemistry (i.e. quantitative determination of chemical properties of a substance)
Astrochemistry		Study of the reactions of chemical elements and molecules found in the universe
Cosmochemistry		Study of the chemical composition of the matters found in the universe
Environmental chemistry		Study of chemical and biochemical phenomena that occur in the environment
